Greetings from Denver!

The Mathematical and Statistical Sciences Department at the University of Colorado at Denver is actively recruiting out-of-state students for its M.S. and Ph.D. programs. We would like to ask for your help in recommending our program to highly qualified students. UC-Denver is an urban university located in the heart of downtown Denver. We are anticipating a significant number of open graduate assistantships this year and are eager to identify promising students interested in pursuing a M.S. or Ph.D. in applied mathematics. Our program features:

- Vibrant research groups in Computational Mathematics, Discrete Mathematics, Operations Research, Finite Geometry, Probability, Statistics, Computational Biology and Mathematics Education.
- High faculty-to-student ratios, enabling students to develop close working relationships with their advisors.
- Opportunities for collaborations with local industry and national laboratories through our Math Clinic Program and our Statistical Consulting Workshop and Service.
- Financial support for Ph.D. students (close to half of our Ph.D. students receive financial support).
- Centers for Computational Mathematics and Computational Biology, which provide opportunities for students to explore multidisciplinary research collaborations.

Needless to say, there is the additional attraction of living at the foot of the Rocky Mountains! Further information on our program is available at math.ucdenver.edu, on the University of Colorado at www.ucdenver.edu/ and on Denver at www.denver.org.

Students should feel free to contact me directly, by email or phone, to talk about further opportunities.

Best wishes,

Stephanie A. Santorico, Ph.D.
